Suman Saurabh Lugun

Product Leader · 10 years across FinTech & eCommerce · Building AI-first products

Bengaluru, India | saurabhlugun07@gmail.com | linkedin.com/in/suman-saurabh-lugun | github.com/saurabhlugun-byte | portfolio-saurabh-8bb5.vercel.app

SUMMARY

Product leader with 10 years across FinTech and eCommerce: 0-to-1 products, an omni-channel platform at scale, and B2B fintech products serving 200M+ folios. Recruited and mentored teams across product, analytics, marketing and operations. Recently built RupeeScope, an LLM-powered personal finance analyzer, solo from scope to closed beta in 6 weeks, owning evals, model and cost tradeoffs, and privacy-first architecture.

SKILLS

AI / LLM product: LLM application design, prompt engineering, LLM evals (golden datasets, ground-truth labelling, regression testing), structured outputs and schema validation, model selection and cost/latency tradeoffs, text-to-SQL, hybrid AI + rules systems, document extraction

Product: 0-to-1 products, product strategy and roadmaps, discovery and requirements, user stories, agile/scrum, backlog management, GTM, UX collaboration, product analytics

Tools & tech: Claude API, Claude Code, Next.js, Supabase (PostgreSQL), Vercel, SQL, Python, JIRA, Confluence, CleverTap, Google Analytics, Figma AI, Postman, AWS

Domain: Mutual funds and RTA, Loan-Against-Securities, payments, personal finance, pharmacy eCommerce, omni-channel retail

EXPERIENCE

Independent AI Product Builder · Self-directed · Bengaluru — Jun 2026 – Present

RupeeScope — AI personal finance analyzer · in closed beta at rupeescope.com

- Built and launched to closed beta, solo in 6 weeks, an LLM-powered app that turns password-protected Indian bank and credit card PDFs into cross-account spending insights (Next.js, Supabase, Vercel, Claude API), with Claude Code as engineering partner.
- Designed a hybrid architecture where the LLM structures and interprets text but never computes; a deterministic checksum gate (opening + credits − debits = closing) rejects any statement that doesn't balance, so failures are loud, not silent.
- Built the eval harness before the parser: a golden set of 14 real statements with hand-transcribed ground truth, regression runs on every parser or prompt change, a 2-statement held-out set never used for tuning, and cost, latency and escalation rate logged per run.
- Implemented per-task model routing (Sonnet for structuring and text-to-SQL, Haiku for classification, Opus only on checksum-triggered escalation), chosen on escalation math and latency rather than list price; every LLM call metered through one gateway with per-user cost caps.
- Built a classification waterfall (user rules → merchant dictionary → LLM only for residual rows) over a 15-category taxonomy, plus cross-account transfer matching to remove double-counted spend and guarded, read-only text-to-SQL for plain-English questions.
- Shipped privacy-first: statements and passwords processed in memory only, one-click data deletion, row-level security on every table, separate dev/prod environments, email OTP auth, bot protection and a pre-launch security audit.

Jalsa — pass-the-phone party app for an India-aware audience; approved on Google Play, with the 12-tester closed test required for public release still pending.

Deputy Vice President — New Product Development & Innovation · KFin Technologies · Hyderabad May 2025 – Jun 2026

- Owned a new-product and innovation charter for the domestic mutual-fund business, scanning emerging tech (GenAI, ONDC, CDP) and driving discovery-to-prototype on new platform bets; led a team of 2 senior managers.
- Initiated a Cash Management System for AMCs and PMS with Axis MF: ran requirements discovery with their COO and operations team, built the interactive prototype in Figma AI, and kicked off development.
- Directed early development of an AI/LLM-based compliance tool that parses regulatory circulars and generates remediation tasks for system and SOP updates.
- Led a build-vs-buy evaluation of omnichannel CRM/CDP and AI contact-centre platforms (Salesforce, UNFYD), covering call transcription, agent-assist, issue routing and data residency.

Senior Product Manager (E-commerce Head) · Emami Frank Ross · Kolkata Mar 2021 – Dec 2024

- Defined product strategy and roadmap; leveraged 100+ existing stores and launched a dark store with 25K+ SKUs, integrating WMS and 3PLs for rapid, cost-efficient delivery across 1100+ pincodes.
- Built an omni-channel platform integrating POS with OMS for real-time inventory across stores, improving fulfilment from 70% to 94% and enabling 91% on-time deliveries.
- Integrated payment gateways with multiple payment modes, cutting cancellations 27% and raising AOV 35%; launched a recommendation system that lifted add-to-cart events 4%.
- Led end-to-end mobile app development across design and engineering, and set up behavioural analytics (CleverTap, Google Analytics) and real-time KPI dashboards for data-driven decisions.
- Ran sprint planning and backlog grooming; used APM tools to improve API performance 50%. Partnered with marketing on SEO, a promotion engine and cohort-based targeting for acquisition and retention.

Manager — Digital Transformation & Investor Products · KFin Technologies · Hyderabad Apr 2018 – Feb 2021

- Led development and GTM of a B2B Loan-Against-Securities API for banks and fintech platforms across 200M+ folios, driving customer integrations and feedback loops toward product-market fit.
- Led investor-portal development, simplifying onboarding and portfolio view across 26 mutual-fund AMCs in a single app.
- Implemented ML-powered cheque data entry and RPA for banking processes, automating reconciliation and credit identification across multiple bank accounts.
- Integrated identity and account validation for 1M+ daily transactions; partnered with the COO and business heads on operational-efficiency initiatives.

Software Engineer · Samsung R&D Institute · Noida Jul 2014 – May 2016

- Developed browser and page-preloading features for Smart TV, cutting rendering time 50%; contributed to Tizen browser development with teams in Korea and Poland.
- Built controllers for automated sanity testing, saving 40+ hours of manual effort per month.

EDUCATION & CERTIFICATIONS

MBA — Indian Institute of Management Bangalore (IIM-B) 2018
B.Tech, Computer Science & Engineering — Indian Institute of Technology Delhi (IIT-D) 2014
Certifications: Machine Learning Foundations for Product Managers · Managing Machine Learning Projects — Duke University
