Suman Saurabh Lugun

Product Leader · 10 years across FinTech & eCommerce · Building AI-first products
Bengaluru, India | saurabhlugun07@gmail.com | linkedin.com/in/suman-saurabh-lugun
github.com/saurabhlugun-byte | portfolio-saurabh-8bb5.vercel.app

SUMMARY

Product leader with 10 years across FinTech and eCommerce: 0-to-1 products, an omni-channel platform at scale, and B2B fintech products serving 200M+ folios, across mutual funds, payments and pharmacy retail. Recruited and mentored teams across product, analytics, marketing and operations. Recently built RupeeScope, an LLM-powered personal finance analyzer, solo from scope to closed beta in 6 weeks.

SKILLS

AI / ML: LLM application design, prompt engineering, LLM evals (golden datasets, regression testing), model selection and cost/latency tradeoffs, text-to-SQL, hybrid AI + rules systems, recommendation systems, ML-powered document capture, RPA
Product: 0-to-1 products, strategy and roadmaps, discovery and requirements, agile/scrum, GTM for B2B APIs, funnel optimization, cohort-based targeting, product analytics, build-vs-buy evaluation
Tools & tech: Claude API, Claude Code, Next.js, Supabase (PostgreSQL), Vercel, SQL, Python, JIRA, Confluence, CleverTap, Google Analytics, Figma AI

EXPERIENCE

Independent AI Product Builder · Self-directed · Bengaluru — Jun 2026 – Present

RupeeScope — AI personal finance analyzer · in closed beta at rupeescope.com

- Built solo in 6 weeks, from scope to closed beta, an LLM app that turns password-protected Indian bank and card PDFs into cross-account spending insights (Next.js, Supabase, Vercel, Claude API, Claude Code).
- Designed a hybrid architecture where the LLM reads and interprets but never computes: a deterministic checksum gate rejects any statement that doesn't balance, and a rules-first classification waterfall sends only residual rows to the LLM.
- Built the eval harness before the parser: 14 real statements with hand-transcribed ground truth, a 2-statement held-out set, and regression runs on every change tracking cost, latency and escalation rate.
- Routed models per task (Haiku for classification, Sonnet for structuring, Opus only on checksum failure) through one metered gateway with per-user cost caps; shipped privacy-first with in-memory statement processing, one-click deletion, row-level security and a pre-launch security audit.

Jalsa — pass-the-phone party app; approved on Google Play, with the 12-tester closed test required for public release still pending.

Deputy Vice President — New Product Development & Innovation · KFin Technologies · Hyderabad — May 2025 – Jun 2026

- Owned the new-product and innovation charter for the domestic mutual-fund business (GenAI, ONDC, CDP), leading a team of 2 senior managers from discovery to prototype.
- Initiated a Cash Management System for AMCs and PMS with Axis MF: requirements discovery with their COO and operations team, an interactive Figma AI prototype, and development kickoff.
- Directed early development of an LLM-based tool that turns regulatory circulars into remediation tasks, and led a build-vs-buy evaluation of CRM/CDP and AI contact-centre platforms (Salesforce, UNFYD).

Senior Product Manager (E-commerce Head) · Emami Frank Ross · Kolkata — Mar 2021 – Dec 2024

- Launched a dark store with 25K+ SKUs on top of 100+ existing stores, integrating WMS and 3PLs for delivery across 1100+ pincodes; led end-to-end mobile app development and improved API performance 50% with APM tooling.
- Built an omni-channel POS–OMS platform for real-time inventory, lifting fulfilment from 70% to 94% with 91% on-time deliveries.
- Funnel improvement: payment-mode integrations cut cancellations 27% and raised AOV 35%; a recommendation system lifted add-to-cart events 4%.
- Set up behavioural analytics (CleverTap, Google Analytics) and real-time KPI dashboards; partnered with marketing on SEO, a promotion engine and cohort-based targeting for acquisition and retention.

Manager — Digital Transformation & Investor Products · KFin Technologies · Hyderabad — Apr 2018 – Feb 2021

- Led development and GTM of a B2B Loan-Against-Securities API for banks and fintech platforms across 200M+ folios.
- Unified onboarding and portfolio view across 26 mutual-fund AMCs in one investor app; integrated identity and account validation for 1M+ daily transactions.
- Implemented ML-powered cheque data entry and RPA to automate reconciliation and credit identification across bank accounts.

Software Engineer · Samsung R&D Institute · Noida — Jul 2014 – May 2016

- Built Smart TV browser page-preloading that cut rendering time 50%; automated sanity testing, saving 40+ hours a month.

EDUCATION & CERTIFICATIONS

MBA — IIM Bangalore (2018) · **B.Tech, Computer Science & Engineering** — IIT Delhi (2014)
Certifications: Machine Learning Foundations for Product Managers · Managing Machine Learning Projects — Duke University
